Requires urgent action

Overview

As of week 22, BHRUT Information Governance has received 800 Subject Access Requests in 2024 year-to-date. Overall SLA compliance stands at 69.8% against the ICO-mandated 30-day response requirement. 23 requests are currently outstanding and have breached the 30-day limit.

Key Findings

Deceased requests have the longest average turnaround at approximately 28 days, approaching the 30-day SLA limit. Recommend prioritising this request type in current workload allocation.

IG Team SLA compliance is the lowest across all teams, falling below the trust-wide 80% threshold. An urgent review of capacity and case allocation is recommended.

90.5% of all requests are currently Amber status (open and approaching SLA). Only 6.6% are Green (completed on time). This indicates a systemic backlog requiring immediate attention.

Risk

If the 23 currently overdue requests are not resolved within the next 7 days, the trust's overall compliance rate will fall further below the 69.8% current rate. ICO enforcement action requires a sustained breach pattern, but the current trend, with 90.5% of requests at Amber status, warrants close monitoring and immediate intervention.

Recommendations

1. Allocate additional resource to the IG Team for SAR processing in weeks 23-24 to address the compliance shortfall.
2. Establish a weekly case review for any requests exceeding 21 days (amber threshold) to prevent further breaches.
3. Review the Deceased request workflow, the 28-day average turnaround suggests additional clinical sign-off may be causing delays.
4. Implement an alert system to flag requests at day 21 so case managers can prioritise before breach occurs.

Next Review

Week 23 — tracking whether IG Team compliance improves following resource reallocation. Monitor Deceased request turnaround for improvement below 25 days.
